SUMMARY

I am a web developer currently working as a freelancer/consultant. My main expertise is **backend development** and **mobile application development** with a strong background of **coding** and medium exposure to UI development. I am very driven to strong SEO and Security best practices, web performance and **Responsive Web Design**. I produce a clean, organized and standard hand-coding. I have a passion for my job and I am continuously learning new technologies in **web, mobile, browser and desktop** application development and trends.

I also have a very strong affinity for medical applications being original from a background of medicine. I am on the lookout for freelance, part time or contract positions, working remotely or mixed with on site. I would also consider **permanent roles** if the job specifications are good enough.
